

COVER LETTER

Andrés Felipe Martínez Obando

Software Engineer · Information Security · Infrastructure

Bogotá, Colombia · [DATE]

[COMPANY]

Application: [ROLE OR OPPORTUNITY]

Dear Hiring Team,

I am interested in the [ROLE OR OPPORTUNITY] position. I am a Software Engineer pursuing a specialization in Information Security, with experience in external server administration, client support, technical implementation, SQL databases, and incident documentation.

I bring a practical combination of software, security, and infrastructure skills. In my current role, I support server operations and client-facing technical work. I also maintain a home lab with Linux, virtual machines, OpenMediaVault, Docker, and Windows Server 2025 to validate configurations outside production.

My background also includes training and hands-on experience in automotive mechatronics. This path shaped a diagnostic approach to work: understand the problem, identify risks, document findings, and communicate clear actions to technical and nontechnical stakeholders.

I am currently completing CertiProf training as an ISO/IEC 27001 Lead Implementer, Internal Auditor, and External Auditor. I am open to remote full-time, part-time, hourly, or outcome-based work with international teams and freelance clients.

Thank you for your time and consideration. I would welcome a conversation about how I can contribute to [COMPANY]. My portfolio and professional profiles provide additional evidence of my technical work, experience, and contact information.

Sincerely,

Andrés Felipe Martínez Obando
