PROFESSIONAL PROFILE

Software Engineer and Information Security Specialist with an active professional license and experience in enterprise application support, technology infrastructure, server administration, deployments, and incident management. Skilled in Windows Server, Linux, IIS, SQL Server, networking, REST APIs, reporting, and PowerShell automation. Experienced in root cause analysis, release validation, customer support, and technical documentation. Autonomous, investigative, service-oriented, and committed to continuous improvement.

TECHNICAL SKILLS

Support and infrastructure: Windows Server 2008 and later · Ubuntu Linux · Windows services · Storage, RAM and CPU monitoring · DNS · Firewall · VPN · SSL certificates

IIS and deployments: Websites · Application Pools · Bindings · Permissions · Web.config · Endpoints · Test and production environments · Rollback · Release validation

Data, APIs and reporting: SQL Server · SSMS · JOINs and subqueries · Stored procedures · Triggers · REST APIs · JSON · Postman · RDLC

Automation and development: PowerShell · .bat files · Git · Python in progress · Testing, HTTP and API fundamentals

Information security: ISO/IEC 27001 · ISMS · Risk management · Annex A controls · Incident management · DevSecOps

PROFESSIONAL EXPERIENCE

IDAE SOLUCIONES — Software sector

Network Security Analyst and Consultant | Bogotá, Colombia | April 2024 – November 2026

- Administered external servers and monitored storage, memory, CPU, services, and availability for the SAMM enterprise platform.
- Deployed, updated, and configured the platform in test and production; performed release validation and rollback after failures.
- Configured IIS websites, Application Pools, bindings, ports, domains, permissions, SSL certificates, web.config, endpoints, and Windows services.
- Diagnosed incidents using logs, Event Viewer, connectivity checks, IIS, and SQL Server; documented causes, actions, and solutions.
- Built SQL queries, executed stored procedures, modified triggers, and performed backups, restores, and maintenance activities.
- Automated tasks with PowerShell and .bat files; validated REST APIs with Postman and JSON, updated RDLC reports, and supported customers.
